Unit 7 [Trig]

7.0 Introduction

David Guenther

Big Idea

We ended the last unit coming to some situations about similar triangles, but the world of triangles, and particularly right triangles, is quite large. There are a bunch of really neat things to learn about how these mysterious figures work together.

Project

Using your new found skills, figure out the diagonal size of 3 different screens. You will need to show me the angles created from the transfersal, and the challenge is such: you may not use a protractor.
